

The Lombardy company on display at cosmopack in Bologna

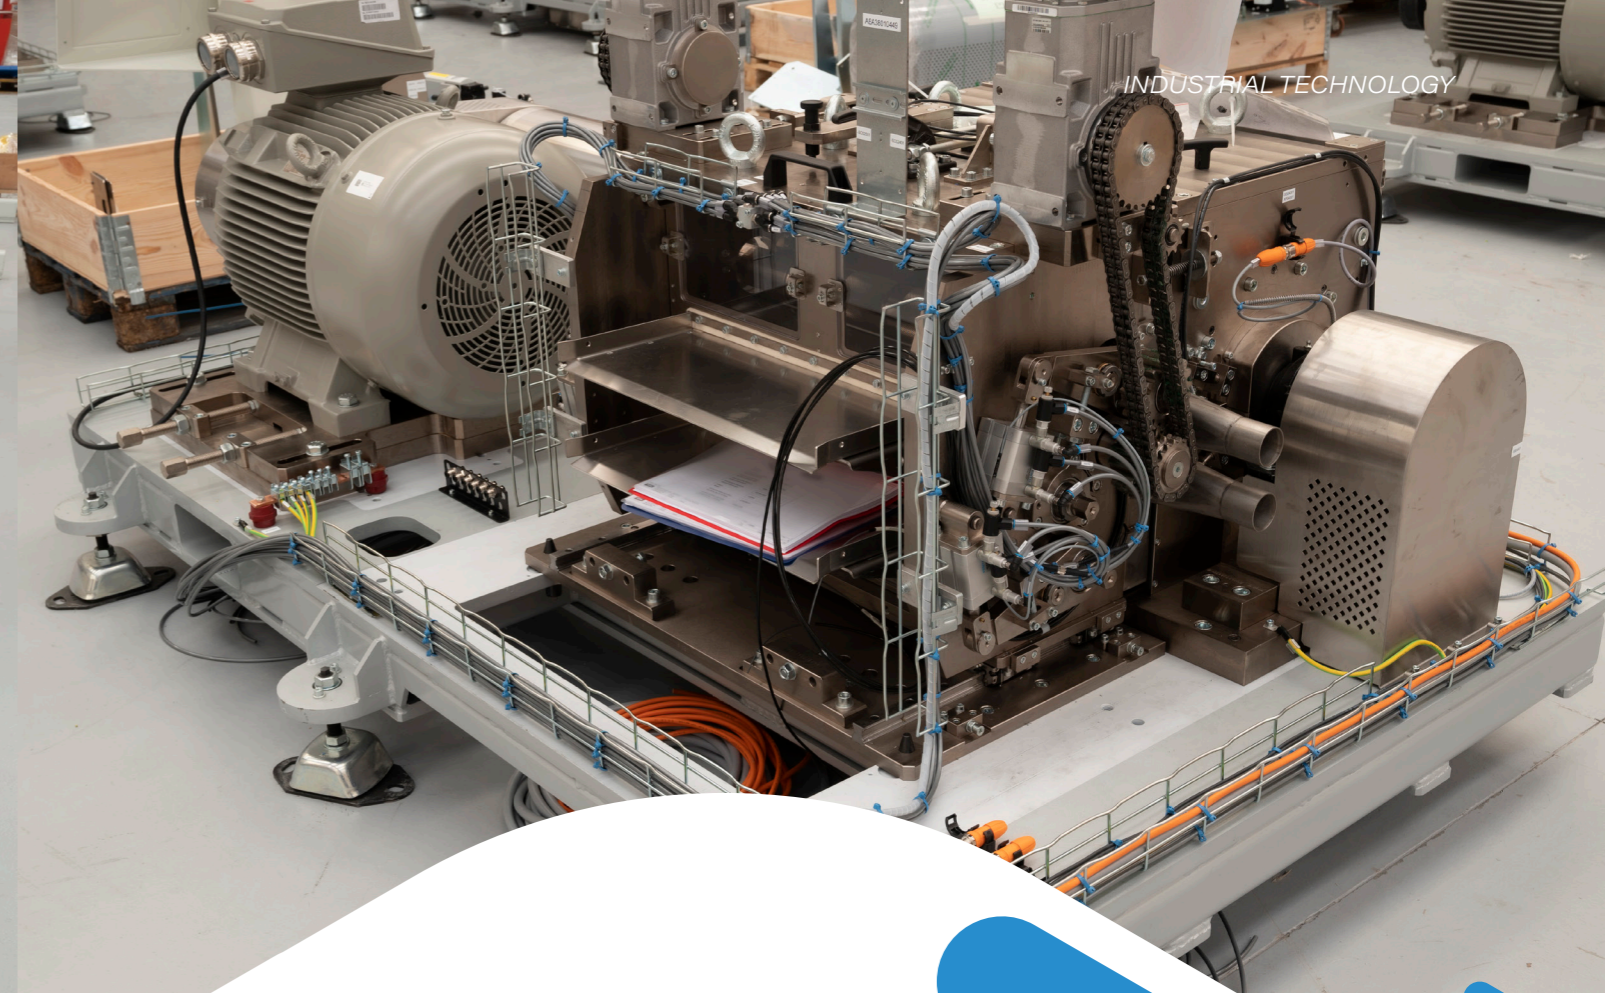

Innovation, technology, and automation at the service of the packaging and design industry. A Made In Italy project signed by DECA ITALIA, a Lombardy-based company that is a worldwide reference point in the production and realization of lines, automatic and semi-automatic machines for the packaging, identification, and handling of cosmetic, pharmaceutical, food and other products.

Founded in 2010 in the plain of Cremasco with the name Deca Engineering, from the intuition of brothers Enrico and Agostino

Caso, at the headquarters in Vaiano Cremasco, the brand over the years has carved out an important role in the world of industrial automation while maintaining a strong connection with the territory: "Our mission is to provide solutions useful for the growth of companies, proposing innovative and sustainable products for every need of automation in production processes. Every product is managed with the aspect of Industry 4.0 and digitalization, a distinctive

feature of all our machines.

"Our support in mechanical design for the development of innovative products - underline the Caso brothers - is followed by retrofit or revamping activities on machines produced by us or even by third parties. Our company follows quality management and certification procedures in line

from March 16th to 18th, 2023, the most anticipated B2B event of the year in the world of technology applied to packaging, a fixed appointment for brand owners and managers of the main multinational companies and beauty chains worldwide, as confirmed by the founders Caso: "After two difficult years and events that have overturned our lives, market demands have changed as well as business models. Technological progress and innovation push us towards new production processes characterized by collaboration between man and machine. The pace of change is really fast and the ability to acquire new knowledge through comparison with other realities is essential for companies like ours. Deca Italia also supports this process with the

with the principles of sustainability, welfare, and respect for the environment. Our know-how allows us to refurbish old or obsolete machines, destined for inactivity in a short time, improving their productivity. To date, we boast a catalog of standard machines but not strictly serial as each of them always presents some custom-made aspects."

With a high-impact and technological stand, Deca Italia will be present at Cosmopack Bologna

launch of a Lean Six Sigma training project, managed and organized with the new partner Magnolia. As for technological innovation, it is instead the result of a new corporate partnership with Enplus Italia, a sister company active in the energy market, particularly in the world of photovoltaics and cogeneration."
